

1) Dispute Trigger

When a market outcome is disputed or uncertain, BetNet may initiate arbitration.

2) Community-Assisted Process

Five randomly selected BetNet members who did not participate in the disputed market are asked to review evidence and vote.

3) Arbiter Eligibility

Arbiters may be screened for conflicts of interest, abuse history, and integrity flags.

4) Evidence Inputs

Evidence may include public official records, data provider outputs, market meta data, and platform logs.

5) Final Authority

If there is discrepancy, deadlock, manipulation risk, or unresolved ambiguity, BetNet retains final authority to determine outcome or cancel/refund the market.

6) Cost Allocation

Class B markets that resolve through arbitration and Class C markets reserve allocation to cover arbitration costs.

7) Cancellation Rule

In case of ambiguity, BetNet may cancel any market in any status and refund all participants.

8) Legal Drafting Note

This policy draft should be reviewed by licensed counsel before production launch.
